

**Invitation to participate in the research project:
Quebec Portrait of Practices Relating to the Establishment of Individualized Education
Plans for Students with Behavioral Difficulties**

Information Form for School Staff

The Lead Researcher

The research is being conducted by Nancy Gaudreau, Ph. D., Full Professor in the Département d'études sur l'enseignement et l'apprentissage within the Education Sciences Faculty at Université Laval.

Aim and Purpose

The research aims to draw a Quebec portrait of practices relating to the establishment of Individualized Education Plans (IEPs) for students with behavioral difficulties. It has the following objectives:

1. Make a portrait of IEP-related practices according to individual (beliefs, intention to act, socio-demographic characteristics) and contextual (level of education, type of school environment, etc.), as well as the satisfaction of all actors involved in establishing IEPs for students with behavioral difficulties;
2. Compare the factors linked to the theoretical model (beliefs, intention to act, practices) according to school stakeholders;
3. Identify the factors related to the theoretical model favoring or hindering the implementation of an IEP, while comparing them to best practices in this field;

What does this involve?

Tasks for School Staff

Your participation in this research project involves:

- Complete an online questionnaire once again on your experience in establishing and implementing intervention plans for students with behavioral difficulties. This task takes between 15 and 25 minutes depending on your employment situation. You can directly access the online questionnaire at the bottom of this page.

Compensation

You have a chance to win one of 12 \$100 gift cards at a bookstore. The draw will be made among all school personnel who have completed the online questionnaire.

The Potential Benefits, Risks and Inconveniences of Participation

By taking part in this project, you participate in the advancement of knowledge on the establishment of IEPs and, possibly, in the improvement of training and support for school teams on this subject.

There are no social or economic risks associated with your participation. The time spent completing the online questionnaire (between 15 and 25 minutes) remains the only drawback.

Voluntary participation and right of withdrawal

You are completely free to participate in this research project. **Your participation in the research is completely independent of your job and will not affect it.** At any time, you can also end your participation without negative consequences or prejudice and without having to justify your decision. If you decide to end your participation, you will only need to notify the principal investigator whose contact details are included in this document. All personal information concerning you and the data you provide will then be destroyed, unless you authorize researchers to use it for research, despite your withdrawal. Where applicable, your data will be kept according to the measures described in the "Confidentiality" section and which will be applied to all participants.

Results Summary

A summary of the research results will be published on the research project website (<https://www.fse.ulaval.ca/recherche-ng/recherche/portrait-quebec-pi>) by September 2026 at the latest. Interested parties can easily access it.

Confidentiality and Data Management

Confidentiality is ensured within the limits prescribed by Quebec and Canadian laws. The following measures will be applied to ensure the protection of privacy and ensure the confidentiality of information provided by participants.

- The names of participants will not appear in any report.
- The various research documents will be codified (one code per participant) and only researchers and auxiliaries will have access to the code key (list of names and codes) which will be kept under lock and key at the principal investigator's office separately from the material and research data.
- Individual participant results will never be released, unless they authorize it;
- Research materials, including data, will be kept in a locked filing cabinet at the office of the principal investigator at Université Laval for documents printed or deposited and encrypted on the faculty server for computerized material to which access will be reserved for researchers and auxiliaries and where the files will be secured by a password. The research material and data will be destroyed two years after the publication of the research results, i.e. around May 2027.
- The research will be published in scientific journals, but no participant can be identified.

Your involvement is invaluable in enabling us to carry out this study and we thank you in advance for the time, attention and support given to this project.

Additional Information and Researcher Contact Information

If you have any questions about the research, please contact Nancy Gaudreau (Lead Researcher) by email at projet-pi@fse.ulaval.ca
